LITTLE ROCK'S #1

THE GOOD EARTH

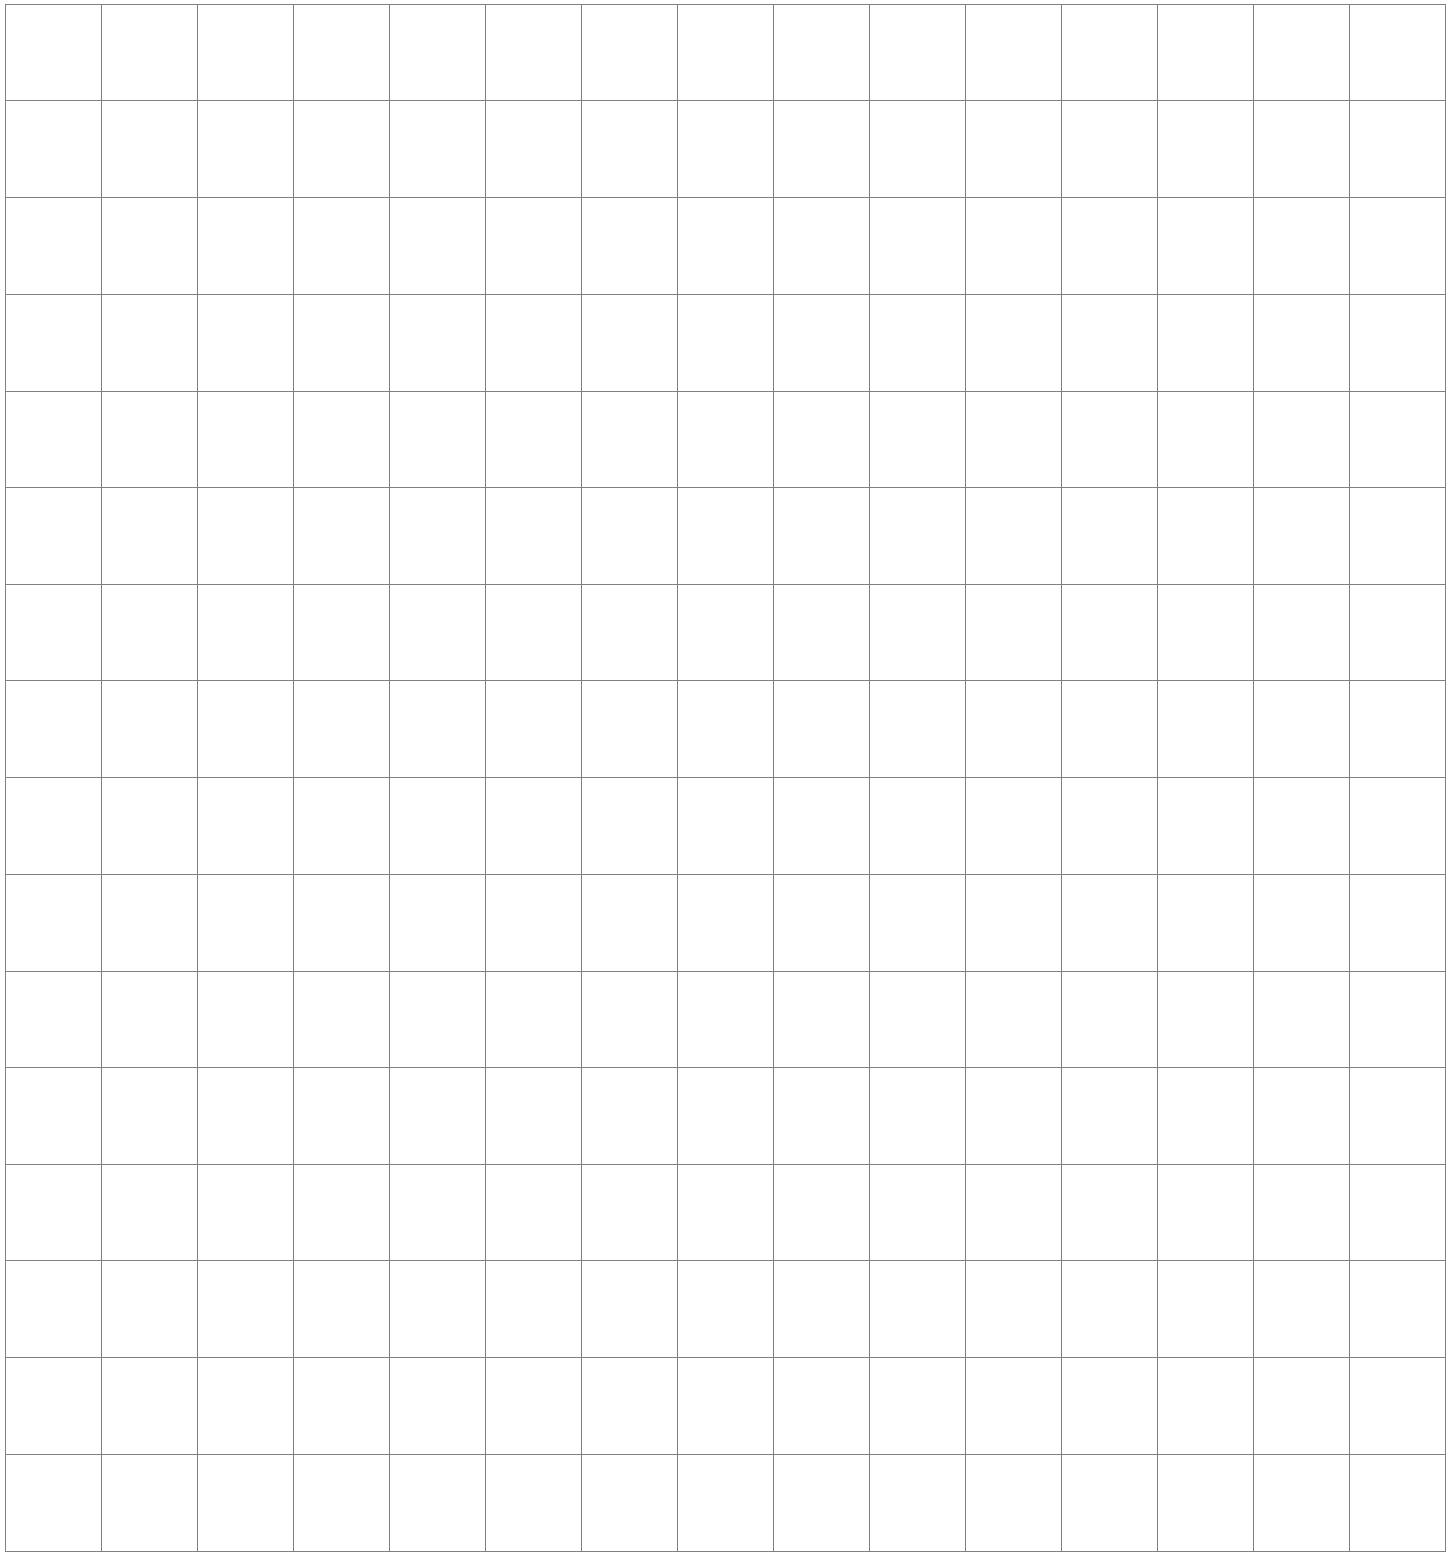
GARDEN CENTER

Here are our keys to successful landscape designing!

Planning makes all the difference *and* saves you money! Draw out your home and existing landscape including plants that you want to keep, sidewalks, doors, decks, patios and windows.

1. Locate North on your map.
2. Take some photos of your landscape different times during the day & bring them in to the store.
3. Determine how many hours of sun your landscape areas receive.
4. Think about your landscape goals.
5. And consider how much maintenance you want to do.

Each square is half an inch, which can equal 2 or 20 feet, whatever works best for your space!



Plants & garden features I prefer:
